

Cable-Extension Position Transducer

CANbus • SAE J1939

Ranges: 0-10 to 0-250 inches

Industrial Grade • High Cycle Applications

PT5CN

Specification Summary:

GENERAL

Full Stroke Ranges..... 0-10 to 0-250 inches
 Electrical Interface..... CANbus SAE J1939
 Protocol..... Proprietary B
 Accuracy..... $\pm 0.25\%$ to $\pm 0.10\%$ full stroke
 Repeatability..... $\pm 0.02\%$ full stroke
 Resolution..... $\pm 0.003\%$ full stroke
 Measuring Cable..... stainless steel or thermoplastic
 Enclosure Material..... hard anodized aluminum
 Sensor..... plastic-hybrid precision potentiometer
 Potentiometer Cycle Life..... *see ordering information*
 Maximum Retraction Acceleration..... *see ordering information*
 Weight..... 5 lbs. max.

ELECTRICAL

Input Voltage..... 7 - 18 VDC
 Input Current..... 60 mA max.
 Baud Rate..... 125K, 250K, or 500K via DIP switches
 Update Rate..... 10 ms. (20 ms. available—*contact factory*)

ENVIRONMENTAL

Environmental Suitability..... NEMA 4/6, IP 65/67
 Operating Temperature..... -40° to 185°F (-40° to 85°C)
 Vibration..... up to 10 G's to 2000 Hz maximum

The PT5CN cable extension position transducer communicates linear position via the CANbus SAE J1939 interface providing a precision position feedback to your PLC. The PT5DN is offered in full stroke ranges up to 250 inches and a thermoplastic measuring cable for high cycle and rugged applications.

Because the PT5CN uses a potentiometer as its sensing element, the position signal is “absolute” and does not have to be reset to a “home” position upon startup.

I/O Format and Settings

• Identifier

	Message Priority		Future Use		J1939 Reference Proprietary B								Data Field Type*								Not Used		Node ID**							
Example –	1	0	0	0	0	1	1	1	1	1	1	1	1	0	1	0	1	0	0	1	1	0	0	1	1	1	1	1	1	1
Identifier Bit No. –	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0	
Hex Value –	0				F				F				5				3				3		F							

*Sensor field data can be factory set to customer specific value. **Customer defined, set via Dips 1-6. Bit values shown for example only, see Address Setting below.

• Data Field

B₀ = LSB current % of measurement range byte
B₁ = MSB current % of measurement range byte
B₂ = LSB current measurement count byte
B₃ = MSB current measurement count byte

B₄ = error flag
B₅ = error flag
B₆ = LSB velocity data byte
B₇ = MSB velocity data byte

B ₇	B ₆	B ₅	B ₄	B ₃	B ₂	B ₁	B ₀
----------------	----------------	----------------	----------------	----------------	----------------	----------------	----------------

Current Measurement Count

The Current Measurement Count (CMC) is the output data that indicates the present position of the measuring cable. The CMC is a 16-bit value that occupies bytes **B₂** and **B₃** of the data field. **B₂** is the **LSB** (least significant byte) and **B₃** is the **MSB** (most significant byte).

The **CMC** starts at **0x0000** with the measuring cable fully retracted and continues upward to the end of the stroke range stopping at **0xFFFF**. This holds true for all ranges.

Converting CMC to Linear Measurement

To convert the current measurement count to inches or millimeters, simply divide the count by 65,535 (total counts over the range) and then multiply that value by the full stroke range:

$$\left(\frac{\text{current measurement count}}{65,535} \right) \times \text{full stroke range}$$

Sample Conversion:

If the full stroke range is **30 inches** and the current position is **0x0FF2** (4082 Decimal) then,

$$\left(\frac{4082}{65,535} \right) \times 30.00 \text{ inches} = 1.87 \text{ inches}$$

If the full stroke range is **625 mm** and the current position is **0x0FF2** (4082 Decimal) then,

$$\left(\frac{4082}{65,535} \right) \times 625 \text{ mm} = 39 \text{ mm}$$

B ₇	B ₆	B ₅	B ₄	B ₃	B ₂	B ₁	B ₀
----------------	----------------	----------------	----------------	----------------	----------------	----------------	----------------

Current % of Measurement Range

The Current % of Measurement Range is a 2-byte value that expresses the current linear position as a percentage of the entire full stroke range. Resolution is **.1 %** of the full stroke measurement range.

This value starts at **0x0000** at the beginning of the stroke and ends at **0x03E8**.

Example:

Hex	Decimal	Percent
0000	0000	0.0%
0001	0001	0.1%
0002	0002	0.2%
...
03E8	1000	100.0%

B ₇	B ₆	B ₅	B ₄	B ₃	B ₂	B ₁	B ₀
----------------	----------------	----------------	----------------	----------------	----------------	----------------	----------------

Error Flags

0x55 (yellow LED on controller board) indicates that the sensor has begun to travel beyond the calibrated range of the internal position potentiometer.

0xAA (red LED on controller board) indicates that the sensor has moved well beyond the calibrated range of the internal position potentiometer.

If either error flag occurs within the full stroke range of the sensor, the unit should be returned to the factory for repair and recalibration.

Velocity

Data in bytes **B₇** - **B₆** is the change in the **CMC** (current measurement count) over a 100 msec time period. This data can then be used to calculate velocity in a post processing operation.

B ₇ - B ₆	HEX (Decimal)	max "reverse" velocity	max "forward" velocity	Velocity (cts./100 msec.)
0x0000 (0)				- 32767 counts
0x7FFF (32767)				"0" counts (no change)
0xFFFF (65535)				32767 counts

Velocity Calculation

$$\left(\frac{\text{count change} - 32767}{.1 \text{ sec. time period}} \right) \times \left(\frac{\text{full stroke range}}{65,535} \right)$$

Sample Calculations

Cable Extension (positive direction):

B₇-B₆ = 0x89C6 (43462 Dec), **full stroke = 60 in.**

$$\left(\frac{35270 - 32767}{.1 \text{ sec}} \right) \times \left(\frac{60 \text{ in.}}{65,535} \right) = 22.92 \text{ in. / sec.}$$

Cable Retraction (negative direction):

B₇-B₆ = 0x61A8 (25000 Dec), **full stroke = 60 in.**

$$\left(\frac{25000 - 32767}{.1 \text{ sec}} \right) \times \left(\frac{60 \text{ in.}}{65,535} \right) = -71.11 \text{ in. / sec.}$$

Setting the Address (Node ID) and Baud Rate

Address Setting (Node ID)

The Address Setting (Node ID) is set via 6 switches located on the 8-pole DIP switch found on the DeviceNET controller board located inside the transducer.

The DIP switch settings are binary starting with switch number 1 (= 2⁰) and ending with switch number 6 (= 2⁵).

Baud Rate

The transmission baud rate may be either factory preset at the time of order or set manually at the time of installation.

The baud rate can be set using switches 7 & 8 on the 8-pole DIP switch found on the DeviceNET controller board located inside the transducer.

CANBus Controller Board

DIP-1 (2 ⁰)	DIP-2 (2 ¹)	DIP-3 (2 ²)	DIP-4 (2 ³)	DIP-5 (2 ⁴)	DIP-6 (2 ⁵)	address (decimal)
0	0	0	0	0	0	0
1	0	0	0	0	0	1
0	1	0	0	0	0	2
...
1	1	1	1	1	1	63

DIP-7	DIP-8	baud rate
0	0	125k
1	0	250k
0	1	500k
1	1	125k

internal dip switches & controller board

to gain access to the controller board, remove four Allen-Head Screws and remove end cover bracket.

Caution! Do Not Remove Spring-Side End Cover
removing spring-side end cover could cause spring to become unseated and permanently damaged.
